## Culture Night at Tyndall National Institute 22 Sept 2017

Discover the technology of the future as Tyndall National Institute opens its doors on Friday 22 September 2017 for an evening celebrating science and space. Meet our scientists who will present their cutting-edge research and learn about electronics and photonics (the science of light) through a series of interactive demonstrations - including how to make music travel along a laser and how to play an electronic instrument without any physical contact!

From the impressive glass atrium, you can observe our state-of-the-art fabrication laboratories, where silicon wafers and microchips are produced. Dress up as a fabrication researcher and learn about cleanroom technology.

As home to the European Space Agency Space Solutions Centre Ireland, we're giving you the chance to travel out of this world as you step inside Blackrock Castle's portable planetarium to explore the Solar System and roam our galaxy, the Milky Way.

Take a step back and ponder how art and science are linked by exploring an exhibition of artwork by Angela Gilmour and Johnny Bugler.
